

# Basic Discord Bot

---

This repo contains a basic Discord bot which greets new users with a personal message and also let people add roles to themselves. For the easier use the 'discord.js' library is used.

*Note: This Code is somehow poorly written because of code duplication (and maybe general flaws with JavaScript as it isn't my strongest programming language). My main focus was to create a functioning bot for my own Discord Server.*

## TODO

- ☒ !nice: On command - Bot joins voice channel, in which the user who commanded, and plays a mp3-snippet
- ☒ !rmRole: On command - Bot removes specific role
- ☐ regex for auto answer if no known command was send
- ☐ !casino: Let Members earn points
